Summary of: Biomass Energy Priorities for Developing Nations

- **Biomass energy deserves low priority when water is scarce or agriculture is stressed to meet needs for food.**
- **Logistics determine whether biomass energy makes sense. A nation with dismal prospects for biomass energy may have a few regions where it is profitable.**
- **A major thrust for alcohol fuels is a gamble. A more cautious approach is to substitute biomass for coal, oil, and natural gas as chemical feedstock. Biomass is more reactive and suited better for enzymatic conversions.**
- **Low technology means lower capital investment and less risk.**
