

BIOCATALYSIS: WE CREATE CHEMISTRY - WITH A LITTLE HELP FROM ENZYMES

Kai Baldenius, White Biotechnology Research, BASF SE, Germany
kai.baldenius@basf.com

In the last decades the application of enzymes for enantioselective syntheses has made its way to industrial use. BASF has led this development with its Chipros® product line of chiral intermediates with a particular focus on chiral amines. However, the horizon for enzymatic catalysis is now reaching beyond pharma intermediates. Examples for non-chiral volume chemical application will be given.
